control room & network ops center displays • simulation & VR • military display systems • commercial display applications

One-of-a-kind display solutions  
from concept to completion.

PH: 321-757-8484 | Toll Free: 877-550-0900

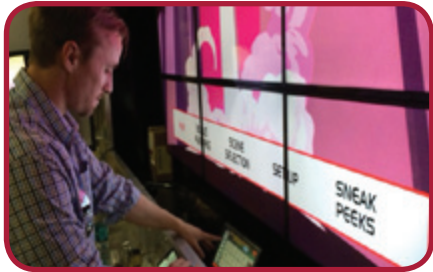

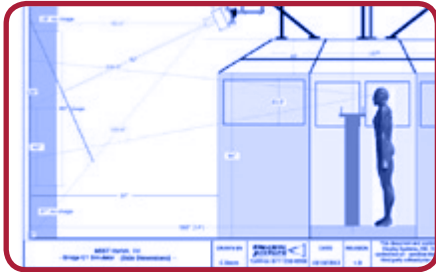

A leader in simulation and control room display applications.

Electric Picture Display Systems has been engineering and installing state-of-the-art projection systems for simulation, VR, network ops centers, corporations, government and religious organization since 2003.

Located on Florida’s Space Coast, Electric Picture operates from its 4,000 square foot headquarters facility. The facility houses a fabrication workshop, demonstration setups including a helicopter training simulator, research and development, and core company personnel.

*Electric Picture manages all phases of projects from concept through installation:*

Complete systems integration, installation & support.

**SYSTEM DESIGN & ENGINEERING -**  
Custom concept, fabrication and integration to suit any location circumstances.

**INSTALLATION & ON-SITE TRAINING -** Testing of assembled systems before expert installation. Training performed after installation.

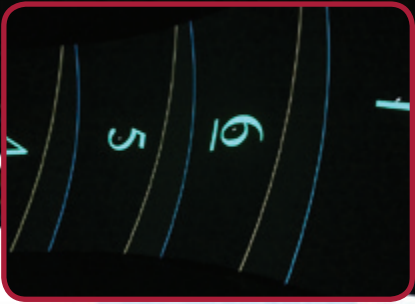

**SIGNAL TRANSMISSION**  
Ensures signal integrity via Fiber Optic or CAT 6/7 and proven extenders having rock solid EDID management.

**LONG TERM SUPPORT**  
Periodic Maintenance and upgrade support for 3–5 year terms, including 24/7 phone support.

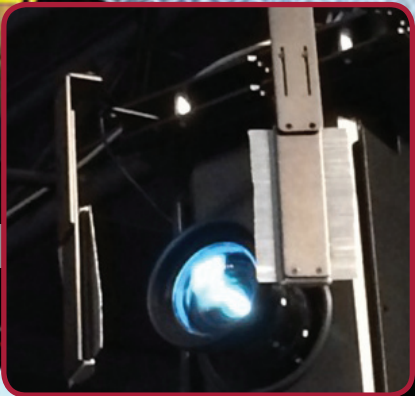

*We custom design, spec, fabricate and install the optimal display system for any simulation need.*

*Every aspect of our integrated systems is tested and finetuned.*

systems integration & installation

Our displays drive the largest Maritime FMB Simulator in America.

*Our patent-pending Mantis Optical Masking System helps to create seamless simulation displays.*

commercial  
display &  
simulation

## Commercial applications that awe and inspire.

The creative applications of simulation and display are boundless. From planetarium displays and immersive ceiling video projections to elegant video walls of any size, Electric Picture can capture your vision and bring it to jaw-dropping reality.

## Integrated simulation solutions with proprietary technology.

Our simulation systems represent practical options for training pilot, air traffic controllers, naval captains, train engineers or construction equipment operators. Real live training can be cost-prohibitive or simply too dangerous.

## aviation & maritime simulation

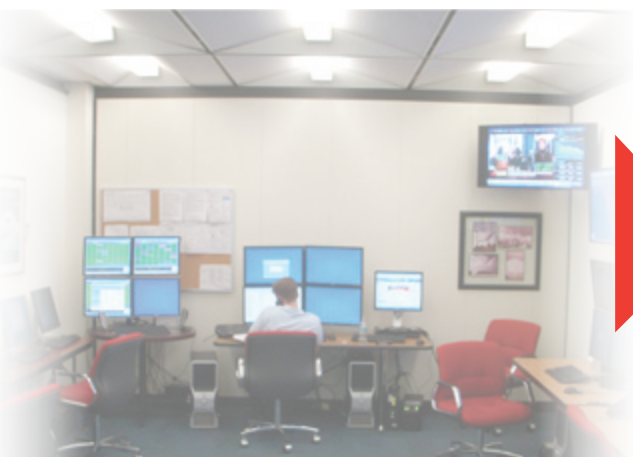

# Advanced control rooms for ultimate control.

For operations requiring 24/7 continuous monitoring where security personnel need to monitor areas and situations, Electric Picture can design, engineer, fabricate and install a state-of-the-art system that is right for your needs and budget.

For round-the-clock vigil on all the movements on traffic violation, airport security and other sensitive areas and activities, we can deploy end-to-end control room video wall, operations center and data monitoring systems for collaborative monitoring facilities.

control rooms & op centers

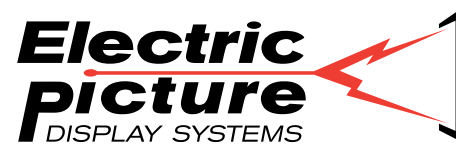

## Tailored for superior performance in military simulation.

We design simulation applications that address a variety of needs and challenges for military and government applications. Factors such as eye-limiting resolution, geometry, image blending and warping, resolution, color and brightness uniformity, and latency are key criteria that we consider in developing a custom integrated solution.
